### **Auditor's Report**

#### **To the shareholders of EFG Holding Company (Previously EFG - Hermes Holding Company)**

We have audited the accompanying consolidated financial statements of (Previously EFG - Hermes Holding Company) which comprise the consolidated statement of financial position as at 31 December 2023, and the consolidated statements of income, comprehensive income, changes in equity and cash flows for the financial year then ended, and a summary of significant accounting policies and other explanatory notes.

#### ***Management's Responsibility for the Financial Statements***

These consolidated financial statements are the responsibility of Company's management. Management is responsible for the preparation and fair presentation of these consolidated financial statements in accordance with the Egyptian Accounting Standards and in the light of the prevailing Egyptian laws, management responsibility includes, designing, implementing and maintaining internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error; management responsibility also includes selecting and applying appropriate accounting policies; and making accounting estimates that are reasonable in the circumstances.

#### ***Auditor's Responsibility***

Our responsibility is to express an opinion on these consolidated financial statements based on our audit. We conducted our audit in accordance with the Egyptian Standards on Auditing and in the light of the prevailing Egyptian laws. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance whether the financial statements are free from material misstatement.

**Hazem Hassan**

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion on the financial statements.

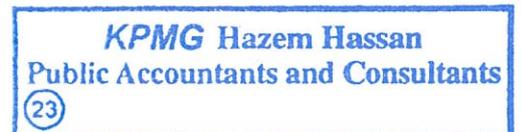

***Opinion***

In our opinion, the consolidated financial statements referred to in the first paragraph above present fairly, in all material respects, the consolidated financial position of the company as of December 31, 2023 and its consolidated results of its operations and its consolidated cash flows for the year then ended in accordance with Egyptian Accounting Standards and comply with applicable Egyptian laws and regulations relating to the preparation of these financial statements.

Cairo, March 20, 2024

### **38- Measurement of fair value**

- A number of the Group's accounting policies and disclosures require the measurement of fair values, for both financial and non-financial assets and liabilities.
- When measuring the fair value of an asset or a liability, the Group uses observable market data as far as possible. Fair values are categorised into different levels in a fair value hierarchy based on the inputs used in the valuation techniques as follows.
  - Level 1: quoted prices (unadjusted) in active markets for identical assets or liabilities.
  - Level 2: inputs other than quoted prices included in Level 1 that are observable for the asset or liability, either directly (i.e. as prices) or indirectly (i.e. derived from prices).
  - Level 3: inputs for the asset or liability that are not based on observable market data (unobservable inputs).
- If the inputs used to measure the fair value of an asset or a liability fall into different levels of the fair value hierarchy, then the fair value measurement is categorised in its entirety in the same level of the fair value hierarchy as the lowest level input that is significant to the entire measurement.
- Valuation techniques include net present value and discounted cash flow models, comparison with similar instruments for which observable market prices exist and other valuation models. Assumptions and inputs used in valuation techniques include risk-free and benchmark interest rates, credit spreads and other premiums used in estimating discount rates, bond and equity prices, foreign currency exchange rates.
- The following table analyses financial instruments measured at fair value at the reporting date, by the level in the fair value hierarchy into which the fair value measurement is categorised. The amounts are based on the values recognised in the statement of financial position:

**40- Financial instruments and management of related risks:**

The Company's financial instruments are represented in the financial assets and liabilities. Financial assets include cash balances with banks, investments and debtors while financial liabilities include loans and creditors. Notes to financial statements includes significant accounting policies applied regarding basis of recognition and measurement of the important financial instruments and related revenues and expenses by the company to minimize the consequences of such risks.

Management of financial risk in the commercial bank (aibank) is conduct through a separate organization from the investment bank due to regulatory rules and operational necessity. Below is a summary of the risk management frame work in both business segments.

**40-1 Risk management framework in the investment bank:**

**Market risk**

Market risk is defined as the potential loss in both on and off financial position resulting from movements in market risk factors such as foreign exchange rates, interest rates, and equity prices.

Market risk is represented in the factors which affect values, earnings and profits of all securities negotiated in stock exchange or affect the value, earning and profit of a particular security.

According to the company's investment policy, the following procedures are undertaken to reduce the effect of this risk.

- Performing the necessary studies before investment decision in order to verify that investment is made in potential securities.
- Diversification of investments in different sectors and industries.
- Performing continuous studies required to follow up the company's investments and their development.

**Foreign currencies risk**

- The foreign currencies exchange risk represents the risk of fluctuation in exchange rates, which in turn affects the company's cash inflows and outflows as well as the value of its assets and liabilities in foreign currencies.
- The company has reevaluate assets and liabilities at the financial position date as disclosed in foreign currency accounting policy.

### **Risk management**

In the ordinary course of business, the Group is exposed to a variety of risks, the most important of which are liquidity risk, interest rate risk, currency risk, credit risk and market risk. These risks are identified, measured and monitored through various control mechanisms in order to price facilities and products on a risk adjusted basis and to prevent undue risk concentrations.

The independent risk control process does not include business risks such as changes in the environment, technology and industry. They are monitored through the Group's strategic planning process.

### **Credit risk**

Credit risk is the risk of a person or an organization defaulting in the repayment of their obligations to the Group in respect of the terms and conditions of the credit facilities granted to them by the Group. The management minimizes this risk by spreading its loan portfolio overall economic sectors and by adopting appropriate procedures and controls to evaluate the quality of the credit facilities granted and the creditworthiness of the borrowers. The credit risk of connected accounts is monitored on a united basis. In addition, the effective credit appraisal procedure for examining applications for credit facilities followed by the Group, adopts as the main criteria the repayment capability and obtaining sufficient collateral. The continuous monitoring of credit accounts and the timely preventive action further minimize, to a large extent, the exposure to credit risk.

### **Liquidity risk**

Liquidity risk is the risk that the Group will be unable to meet its payment obligations when they fall due under normal and stress circumstances. To limit this risk, management has arranged diversified funding sources in addition to its core deposit base, manages assets with liquidity in mind and monitors future cash flows and liquidity on daily basis. This incorporates an assessment of expected cash flows and the availability of high grade collateral which could be used to secure additional funding if required.

The Group maintains a portfolio of high marketable and diverse assets that can be easily liquidated in the event of an unforeseen interpretation of cash flow. In addition, the Group maintains statutory deposits with the Central Banks.

The liquidity position is assessed and managed under a variety of scenarios, giving due consideration to stress factors relating to both the market in general and to the Group in specific. The Group maintains a solid ratio of high liquid net assets in foreign currencies to deposits and commitments in foreign currencies taking markets conditions into consideration.

#### **Interest rate risk**

Interest rate risk stems from the sensitivity of earnings to future movements in interest rates applied on assets and liabilities.

The Group's management closely monitors interest rate fluctuations on a continuous basis and ensures that assets and liabilities are matched and re-priced in a timely manner. The Group is exposed to interest rate risk as a result of mismatches or gaps in the amounts of assets and liabilities that mature or are re-priced in a given period. The most important source of interest rate risk derives from the lending, funding and investing activities, where fluctuations in interest rates are reflected in interest margins and earnings.

#### **Equity price risk**

Equity price risk is the risk that the value of a portfolio will fall as a result of change in stock prices. Risk factors underlying this type of market risk are a whole range of various equity (and index) prices corresponding to different markets (and currencies/maturities), in which the Group holds equity-related positions.

The Group sets tight limits on equity exposures and the types of equity instruments that traders are allowed to take positions in. Nevertheless, depending on the complexity of financial instruments, equity risk is measured in first cash terms, such as the market value of a stock/index position, and also in price sensitivities, such as sensitivity of the value of a portfolio to changes in the underlying asset price. These measures are applied to an individual position and/or a portfolio of equity products.

### **Operational risk**

Operational risk is the risk of direct or indirect loss due to an event or action causing failure of technology, process infrastructure, personnel, and other risks having an operational risk impact. The Group seeks to minimize actual or potential losses from operational risk failure through a framework of policies and procedures that identify, assess, control, manage, and report those risks. Controls include effective segregation of duties, access, authorization and reconciliation procedures, staff education and assessment processes.

### **Fair value of financial instruments**

The fair value of the financial instruments does not substantially deviated from its book value at the financial position date. According to the valuation basis applied, in accounting policies to the assets and liabilities.

### **Derivative financial instruments and hedge accounting**

- Derivatives are initially recognized at fair value on the date on which a derivative contract is entered into and are subsequently re-measured at their fair value, according to the valuation basis applied, in accounting policies to derivative financial instruments.
- In accordance with an arrangement between the subsidiary, EFG-Hermes Mena Securities Limited Co. and its customers (“the customers”), the Company from time to time enters into fully paid Shares Swap Transaction Contracts (“the contracts”) with the customers. Under the contracts the customers pay to the Company a pre-determined price, which is essentially the market price at the trade date, in respect of certain reference securities. In return for such shares swap transactions the Company pays to the customers the mark to market price of the reference securities at a pre-determined date (normally after one year). However, the contracts can be terminated at any time by either of the parties, which shall be the affected party.  
In order to hedge the price risks with respect to the reference securities under the contracts, the Company enters into back-to-back fully paid Share Swap Transaction Contracts with other subsidiaries, MENA Financial Investments W.L.L. (“MENA-F”) and EFG-Hermes KSA. Accordingly, the Share Swap Transactions are measured at fair value based on underlying reference securities under the contracts.

---

**40-2 Risk management framework in aiBank:**

**Credit risk**

The Bank is exposed to credit risk which is the risk resulting from a party's failure to meet its contractual obligations towards the Bank. The credit risk is considered to be the most significant risk for the bank, therefore requiring careful management. Credit risk is mainly represented in lending activities that give rise to loans, facilities and investment activities that result in the Bank's assets including debt instruments. Credit risk exists also in financial instruments outside the financial position such as loan commitments. The financial risk management and control are centralized in a financial risk management team in the bank's risk management department which reports to the board of directors and head of each business unit regularly.

**Loans and facilities to banks and customers (including commitments and financial guarantee contracts)**

In measuring credit risk of loans and facilities to customers and to banks, the Bank's rating system is based on three key pillars:

- Current exposures to the counterparty and its likely future development, from which the Bank derive the (exposure at default).
- The risk of default failure (Loss given default).
- The probability of default by the customer or counterparty on its contractual obligations.

These credit risk measurements, are embedded in the Bank's daily operations which reflect expected loss through the expected loss model required by the Banking Supervision Committee, and the operational measures can contradict with the burden of impairment in accordance with the previous standards that depend on the losses that have realized on the date of the financial statements (realized loss model) and not the expected losses as will come after.

The Bank assesses the probability of default per each customer using internal rating techniques tailored to the various categories of customers. These techniques have been developed internally and the statistical analyses combine credit officers' personal judgment to reach the appropriate viability rating.

**EFG Holding Company**  
**(Previously EFG - Hermes Holding Company)**  
**(Egyptian Joint Stock Company)**

Translation of consolidated financial  
statements originally issued in Arabic

Notes to the consolidated financial statements for the year ended 31 December 2023 (Continued)  
(In the notes all amounts are shown in EGP Thousands unless otherwise stated)

---

Customers of the Bank are segmented into four viability rating classes. The Bank's viability rating scale, which is shown below, reflects the range of default probabilities defined for each rating class. This means that, in principle, credit positions migrate between classes as the assessment of their probability of default changes. The rating techniques are kept under review and are upgraded as necessary. The Bank regularly validates the performance of the viability rating techniques and their ability to predict cases of default.

**Bank's internal rating classes**

<b>Bank's rating</b>	<b>Rating description</b>
1	Performing Debts
2	Standard Monitoring
3	Special Monitoring
4	Non- Performing Debt

The position exposed to default depends on the amounts expected by the bank to be outstanding when default occurs. For example, for a loan, this position is the nominal value and for commitments, the bank recognizes all amounts actually withdrawn in addition to other amounts that are expected to have been withdrawn up to the date of the delay if it occurs.

Loss given default or loss severity represents the bank's expectation of the extent of loss on a claim should a default occur. It is expressed as percentage of loss to debt and typically varies by type of the debtor, seniority of claim and availability of collateral or other credit coverages.

Estimation of exposure to credit risks to manage the credit risks is a complex matter that requires the use of statistical and electronic models, as the level of exposure to credit risks changes depending on the changes in market conditions and other economic areas in a complex and rapid degree. The exposure to credit risk changes depending on the changes in the level, value and timing of expected cash flows and the passage of time. Accordingly, assessment of the credit risk of the assets portfolio requires further estimations of the probability of default and the related loss rates.

The bank measures credit risk losses by using the probability of default (default in contractual liabilities) based on the carrying amount balance of the financial instrument at the date of exposure at default and loss given default.

### **Credit risk classification**

The Bank assesses the probability of default at the level of each customer / related group / credit product, by using techniques to classify the customers into different categories, taking into account the minimum rating in accordance with the CBE instructions in terms of determining the creditworthiness of the customers and making the provisions issued during the year 2005. Therefore, the Bank uses a group of internally developed models and evaluation techniques for the categories of counterparties, customers and the nature of various loans in light of the available information that is collected on the date of adoption of the used model (such as: level of income, level of disposable income and guarantees for individual clients, revenues, type of industry, and other financial and non-financial indicators of the institutions). The Bank completes such indicators with a set of external data, such as the inquiry reports issued by both CBE and credit reporting companies on borrowers and the reports issued by the other local and external credit rating agencies. Moreover, the models used by the Bank allow the systematic exercise of expert assessment by credit risk officials in the final internal credit rating. Therefore, this allows to consider other matters and indicators that may not have been taken as part of other data inputs in the internally or externally developed assessment models and techniques or through external sources. Credit grades are assessed so that the risk of default increases incrementally at each higher risk grade, namely the difference in default rates between the rating grade A and A- is less than the difference in default rates between rating grade B and B-. Additional considerations for each type of credit portfolio held by the Bank are set out below:

#### **Individuals, retail banking products and small & micro enterprises**

After the date of initial recognition, the borrower's payment behavior is monitored periodically to calculate a measurement of the payment pattern. Any other information known about the borrower, supposed to be determined by the Bank, may have an impact the creditworthiness, such as unemployment rates and non-payment precedents, as they are included to measure the payment pattern and default rates are, accordingly, determined for each payment pattern measurement.

#### **(Large & Medium) Enterprises and Companies**

The rating is determined at the level of the borrower / groups with similar credit risks. Any updated or new credit information or assessments are included in the credit system constantly and periodically. In addition,

---

information about the creditworthiness of the borrower / groups with similar credit risks is also updated periodically from other sources such as financial statements and other published financial and non-financial statements.

#### **Debt Instruments, Treasury Bills and Government Bonds**

The Bank uses the external ratings issued by the institutions mentioned in the CBE's instructions to manage the credit risk in terms of the debt instruments in the investment portfolio. These published classifications are monitored and updated regularly and periodically. The default rates associated with each rating are determined based on the rates realized over the previous twelve months, as published by the aforementioned rating agencies. The loss rate of the government and CBE debt instruments dominated in local currency is zero.

#### **Future data used in the expected loss model**

Future data is used in assessing whether there is a significant increase in the credit risk of financial instruments and estimating the expected credit losses (ECL). The management of Bank determines the main economic variables that affect credit risk and expected credit losses for each credit portfolio by carrying out an analysis of historical data. The economic variables and the related effect on both Probability of Default "PD" and the Exposure at Default "EAD" and Loss Given Default "LGD" are different depending on the financial asset. The Bank will use expert opinions regarding these assumptions and estimates, if necessary.

To determine the impact of such economic variables on both Probability of Default (PD), Exposure at Default (EAD) and Loss Given Default (LGD), the management of the Bank carries out the "regression analysis" to understand the historical effects arising from such variables on the default rates and the inputs used in calculating both Exposure at Default (EAD) and Loss Given Default (LGD).

Further to the key economic scenarios, the management of Bank establishes other potential scenarios in addition to assumptions relating to each scenario separately.

The lifetime probability of default (PD) relating to the key assumption and other assumptions are used, as the outcome of multiplication is determined for each assumption with the related probabilities of each, in addition to the supporting indicators and qualitative indicators. Based on the results of such study, it is assessed whether this financial asset is located at the first, second or third level, on the basis of which it is determined whether the

expected credit losses “ECL” will be computed on 12- month bases “12-month ECL” or over lifetime of the financial instrument “Lifetime ECL”. The expectations and probabilities of occurrence are subject to a high degree of uncertainty, as it is known to any economic forecasts, therefore the actual results may be significantly different from those anticipated. The Bank makes the best estimate of these potential expectations and carries out an analytical study of the irrelevant and non -similar factors for the different credit portfolios to conclude appropriate assumptions for all possible scenarios.

#### **Variable Economic Assumptions**

The most significant assumptions that have an impact on the expected credit losses “ECL” are:

- a) Consumption pricing indicators (CPI)
- b) Unemployment rate
- c) Gross domestic product (GDP)
- d) Gross national saving/investment
- e) Real available income

#### **Classification of the instruments relating to the losses measured on basis of the similar groups**

For ECL provisions, groups are classified on the basis of similar credit risk characteristics, as risk exposure within the Bank is homogeneous. When carrying out this classification, it is taken into consideration that there is sufficient information that enables the Bank to classify the Bank with statistical reliability. When sufficient information is not available, the Bank takes into consideration the complementary internal / external reference data.

#### **Corporate loans**

- Probability of default model (S& P) is used.
- A conciliation was made between “S&P” and “ORR”.
- The model was updated by some economic indicators to keep the probability of default in line with the clients existing in Egypt.
- The model was updated by the ratios of change in the low credit rating of the other clients of the Bank for two years to keep the ratios of model default in line with the clients of the Bank.

### **Credit Guarantees**

The Bank uses many policies and practices to limit the credit risks. The most widely adopted of these is the acceptability of collateral for debt instruments and loan commitments. The Bank has internal policies regarding classes of collateral that can be accepted to limit or decrease the credit risk.

The Bank accrues out an assessment of the guarantees that have been obtained when establishing these loans. This assessment is regularly assessed. The key types of guarantees are:

- Cash and cash equivalent
- Real estate mortgage
- Derivatives margin agreement that has been signed with the Bank as a part of main offsetting agreements.
- Commercial mortgages
- Financial assets pledge such as debt instruments and equity instruments.

The guarantees held as collateral against the financial assets other than loans and facilities depend on the nature of the instrument, as debt securities, government bonds and other qualified bills are generally not secured, except for the asset-backed securities and similar instruments secured by portfolios of financial instruments. The derivatives are often secured.

The policies adopted by the Bank have not been changed significantly in terms of obtaining guarantees during the financial year, and there has been no change in the quality of those guarantees held by the Bank compared to the previous financial year.

The Bank closely monitors the guarantees held against the low – credit financial assets, as it is likely that the Bank will hold collateral to mitigate potential credit losses.

### **Written-off financial instruments (loans)**

The Bank excludes the financial assets that are still under compulsory collection for unpaid contractual amounts of the bad assets. The Bank seeks to fully recover some amounts legally due that were partially or fully written off due to the lack of a possibility of a full recovery.

### **Modifications of loans terms and rescheduling**

The Bank sometimes modifies terms of the loans granted to the customers due to the commercial renegotiation or non-performing to increase the chances of recovery. The activities of restructuring include arrangements

of extension of repayment terms, grace periods, exemption from repayment or some or full interests. Restructuring policies and practices are based on indicators or criteria that indicate – based on the discretion of management - that repayment is likely to continue. These policies are constantly reviewed.

**Reduction and risk avoidance policies**

The Bank manages, limits, and controls the concentration of credit risks at the debtor level, groups, industries, and countries. The Bank regulates the levels of acceptable credit risks by setting limits to the amount of risk that will be accepted at the level of each borrower, or group of borrowers, and at the level of economic activities and geographical sectors. These risks are monitored constantly and are reviewed annually or on a recurring basis, when necessary. Limits of the credit risks at the level of the borrower / bank, producer, sector, and country are quarterly approved by the Board of Directors.

Credit limits for any borrower, including banks, are divided into sub-limits that include the amounts on- and off- balance sheet, and the daily risk limit relating to trading items such as forward foreign exchange contracts. Actual amounts are compared with the daily limits. Exposure to credit risks is also managed through periodic analysis of the ability of borrowers and potential borrowers to meet the repayment of their liabilities and by amending lending limits, if appropriate.

**Means of setting limits of to the risks are shown as following:**

**Guarantees**

The Bank adopts many policies and controls to limit the credit risks. These means include the guarantees obtained against borrowed funds. The Bank sets guiding rules for specific acceptable classes of guarantees. The key types guarantee of loans and facilities are:

- Real estate mortgages
- Mortgage of activity assets such as machinery and merchandise
- Mortgage of financial instruments such as debt instruments and equity.

The financing is often granted in the longer term and loans to the companies are secured. In order to reduce the credit loss to a minimum, the Bank seeks to get additional guarantees from the concerned parties and when indicators of impairment are shown for a loan or facilities. The guarantees taken as collateral for assets other than loans and facilities are determined based on the nature of the instrument. Generally, the debt

instruments and treasury bills are not secured, except for groups of financial instruments covered by Asset-Backed Securities and similar instruments that are secured by a portfolio of financial instruments.

#### **Derivatives**

The Bank maintains strict control limits on net open derivative positions (i.e., the difference between purchase and sale contracts) by both amount and term. The amount exposed to credit risk, at any time, is determined at the fair value of the instrument that provides a benefit for the Bank, i.e. an asset with a positive fair value that represents a portion of the contractual / notional value used to express the size of the existing instruments. This credit risk exposure is managed as part of the overall lending limits with customers, together with potential exposures from market movements. Collateral or other security is not usually obtained for credit risk exposures on these instruments, except where the Bank requires margin deposits from counterparties.

Settlement risk arises in any situation where a payment in cash, securities or equities is made against the expectation of a corresponding receipt in cash, securities, or equities. Daily settlement limits are established for each counter party to cover the aggregate of all settlement risk arising from the Bank's market transactions on any single day.

#### **Master netting arrangements**

The Bank further restricts its exposure to credit losses by entering into master netting arrangements with counterparties with which it undertakes a significant volume of transactions. Master netting arrangements do not generally result in an offset of assets and liabilities shown in the balance sheet, as transactions are either usually settled on a gross basis. However, the credit risk associated with favorable contracts is reduced by a master netting arrangement to the extent that if a default occurs, all amounts with the counterparty are terminated and settled on a net basis. The Bank's overall exposure to credit risk on derivative instruments subject to master netting arrangements can change substantially within a short year, as it is affected by each transaction subject to the arrangement.

#### **Credit related commitments**

The main purpose of credit-related commitments is to ensure that funds are available to the customer on demand, and financial guarantee contracts carry a credit risk related to loans, and documentary and commercial credits issued by the Bank on behalf of the customer to grant a third party the right to withdraw from the Bank within certain amounts and under

specific terms and conditions often secured against the goods being shipped and therefore carries a lower degree of risk than a direct loan.

Commitments to extend credit represent unused portions of authorizations to extend credit in the form of loans, guarantees or letters of credit. With respect to credit risk on commitments to extend credit, the Bank is potentially exposed to loss in an amount equal to the total unused commitments. However, the likely amount of loss is less than the total unused commitments, as most commitments to extend credit are contingent upon customers maintaining specific credit standards. The Bank monitors the term to maturity of credit commitments because longer-term commitments generally have a greater degree of credit risk than shorter-term commitments.

**Expected credit loss measurement policy**

The Bank's policy requires defining three stages for classifying financial assets that are measured at amortized cost, loan commitments and financial guarantees, as well as debt instruments at fair value through other comprehensive income, according to changes in credit quality since the initial recognition, and then measuring (expected credit losses) in the value related to these instruments as follows:

The unimpaired financial asset is classified upon initial recognition in Stage 1 and credit risk is monitored on an ongoing basis by the Bank's credit risk department.

If there has been a significant increase in credit risk since initial recognition, the financial asset is transferred to Stage 2 and the financial asset is not considered impaired at this stage (lifetime expected credit loss in the absence of credit impairment).

If there are indications of impairment in the value of the financial asset, it is transferred to Stage 3, and the Bank relies on the following indicators to determine whether there are objective evidence indicating :

- A significant increase in the rate of interest on the financial asset as a result of the increase in credit risk.
- Negative material changes in the activity and financial or economic conditions in which the borrower operates.
- A scheduling request as a result of difficulties facing the borrower.
- Negative material changes in actual or expected operating results or cash flows.
- Early signs of cash flow/liquidity problems such as delays in servicing creditors/business loans.

Translation of consolidated financial  
statements originally issued in Arabic

Notes to the consolidated financial statements for the year ended 31 December 2023 (Continued)  
(In the notes all amounts are shown in EGP Thousands unless otherwise stated)

•Cancellation of a direct facility by the Bank due to the borrower's high credit risk.

**General Bank Risk Measurement Model**

The management performs classifications in the form of a more detailed subgroup to comply with the requirements of the central bank of Egypt, and the assets exposed to credit risk are classified according to detailed rules and conditions that depend largely on the information related to the customer, his activity, his financial status, and the extent of his regularity of payment.

The bank calculates the required provisions in accordance with the instructions of creditworthiness, on the basis of specific ratios by the Central Bank of Egypt, and in the event that the required provisions in accordance with the rules of the central bank of Egypt exceed the expected credit losses calculated for the purposes of preparing the financial statements, the general bank risk reserve is set aside within rights ownership with a discount on the distributable profits by the amount of that increase, and this reserve is periodically adjusted by increase or decrease so that it is always equal to the amount of the increase between the two provisions, and this reserve is not distributable.

Following is a table on the creditworthiness levels for institutions in accordance with the internal assessment bases compared to the Central Bank of Egypt assessment bases and the provision ratios required for the impairment of the assets exposed to credit risk:

<b>CBE Rating</b>	<b>Rating description</b>	<b>Provision%</b>	<b>Internal rating description</b>
1	Low Risk	0%	Good debts
2	Moderate Risk	1%	Good debts
3	Satisfactory Risk	1%	Good debts
4	Reasonable Risk	2%	Good debts
5	Acceptable Risk	2%	Good debts
	Marginally		
6	Acceptable Risk	3%	Standard monitoring
7	Watch List	5%	Special monitoring
8	Substandard	20%	Non-performing debts
9	Doubtful	50%	Non-performing debts
10	Bad Debt	100%	Non-performing debts

Translation of consolidated financial  
statements originally issued in Arabic

Notes to the consolidated financial statements for the year ended 31 December 2023 (Continued)  
(In the notes all amounts are shown in EGP Thousands unless otherwise stated)

The above table represents the maximum bank exposure to credit risk 31 December 2023 and 31 December 2022, without taking in consideration any collateral held for in-balance sheet items, the balances included are based on net carrying amounts as reported in the balance sheet and as shown above, 36.10% of the maximum exposure arising from loans and facilities to customers against 38.42% at 31 December 2022; While investments in debt tools represent 36%, compared to 41.64% on December 31, 2022.

Management is confident in its ability to continue to control and sustain minimal exposure of credit risk to the Bank resulting from both its loan and facility portfolio and debt Instruments based on the following:

- 94.45% of the loans and facility portfolio is categorized in the top two grades of the internal rating system against 94.55% at 31 December 2022.
- 84.46% of the loans and facility portfolio without accruals or impairment indicators against 86.17% at 31 December 2022.
- 99.39% of the investments in debt instruments and treasury bills represent the debt instruments on Egyptian Government against 89.46% at 31 December 2022.

**Loans and facilities**

Balances of loans and facilities at 31 December 2023 are set out below:

	<b>31 December 2023</b>	<b>31 December 2022</b>

**Restructured loans and facilities**

Restructuring activities include extending payment arrangements, implementing forced management programs, modifying, and postponing payments. Policies for implementing restructuring depend on indicators or criteria that indicate that there is a high probability of Continued payments, based on the personal judgment of management. These policies are subject to continuous review. It is usual to apply restructuring to long-term loans, especially customer financing loans, The restructured loans at 31 December 2023 amounted 431,513 EGP thousands compared to 196,563 EGP thousand at 31 December 2022.

**Written-off loans**

In accordance with the Board of Directors' decision or its specialized committees, the written-off loans from the non-performing loans are written-off against its related loan loss provisions and that step is made after exhausting all the possible recovery processes.

**Debt Instruments and Treasury Bills**

### **Market risk**

The Bank is exposed to market risk, which is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices. Market risks arise from open positions in interest rate, currency and equity products, all of which are exposed to general and specific market movements and changes in the level of sensitivity of market rates or prices such as interest rates, foreign exchange rates and equity prices. The Bank separates exposures to market risk into either trading or non-trading portfolios.

The management of market risks arising from trading or non-trading activities is concentrated in the market risk management of the Bank and is monitored by two teams separately. Periodic reports on market risks are submitted to the Board of Directors and heads of each business unit.

Trading portfolios include those positions arising from the Bank's dealings directly with customers and market-making transactions, where the Bank acts as a principal with customers or with the market. Non-trading portfolios primarily arise from the interest rate management of the entity's retail and commercial banking assets and liabilities, these portfolios include foreign exchange and equity risks arising from investments at amortized cost and at fair value through other comprehensive income.

The Bank uses the method of relating debit interest rate with credit interest rate to avoid the risk of fluctuations in interest rate. The Bank also depends on fluctuated interest rate which does not exceed 3 months except in specific cases interest rates are specified for longer period relating resources portfolio with application portfolio to get return that covers its costs.

The exchange rate risk is measured and hedged by daily follow-up of foreign exchange rates and purchase or sale operations in proportion to market prices with the adoption of limits for foreign currency positions and daily stop-loss limits in proportion to the risks acceptable to the Bank.

The risk of interest rate movements is measured using the standard method for measuring the gap that affects the Bank's profits or the economic value of the Bank.

The risks of securities rate fluctuations are measured. The Market Risk Department follows up on the classification, sale, and purchase of financial assets for the purpose of trading and making a daily assessment of them with close follow-up and working to set the necessary limits for them, in cooperation with the treasury sector, while measuring the value at risk of those instruments if they are kept for the purpose of trading to determine the extent of potential losses.

Translation of consolidated financial statements originally issued in Arabic

Notes to the consolidated financial statements for the year ended 31 December 2023 (Continued)  
(In the notes all amounts are shown in EGP Thousands unless otherwise stated)

Liquidity risk is measured by managing all assets and liabilities inside and outside the balance sheet in line with the Bank's objectives in its management, through the ALCO committee, which identifies the sources from which liquidity risks arise with the management of market risks and the work of possible scenarios for liquidity pressure and management in case of crises.

The causes of market risks are due to the risk of interest rates and exchange rate risks that arise due to the Bank's daily activities. The Bank manages the risks it is exposed to in the market through a comprehensive framework that reflects the limited acceptance of those risks. All reports are presented to the Risk Committee and the Assets and Liabilities Committee of the Bank. market risks are measured as follows:

Measuring the interest rate risk for positions held not for the purpose of trading, which is the risk that arises from unfavorable movements in the prevailing interest rates in the market during a certain period of time, which may negatively affect the Bank's profitability and the economic value of its equity and consequently the bank's position and the Bank's profitability. The Bank calculates the qualitative and quantitative requirements regarding the rate of interest risks of the positions held for non-trading purposes, while carrying out stress tests on them.

**Value at risk of non-trading purpose according to risk type**

**31 December 2023**

**31 December 2022**

	<u>Average</u>	<u>Higher</u>	<u>Lower</u>	<u>Average</u>	<u>Higher</u>	<u>Lower</u>
Interest rate risk	839,393	1,419,214	329,476	206,098	345,451	175,299

**Foreign exchange fluctuation risk**

The Bank is exposed to the effects of fluctuations in the foreign currency exchange rates on its financial position and cash flows. The Board of Directors sets limits on the level of exposure by currency and in aggregate for both overnight and intra-day positions, which are monitored daily. The table below summarizes the Bank's exposure to foreign currency exchange rate risk at the end of financial period, and Bank's financial instruments at carrying amounts, categorized by currency.

**Interest rate risk**

The Bank is exposed to the effects of fluctuations in the levels of the prevailing interest rate in the market, i.e., the risk of cash flows of the interest rate represented in the fluctuation of future cash flows of a financial instrument due to changes in the interest rate of the instrument and fair value risk of the interest rate, i.e., is the risk of fluctuations in the value of the financial instrument as a result of a change in the interest rates in the market. The interest margin may increase due to these changes; however, the profits may decrease if unexpected movements occur. The Bank's Board of Directors sets limits for the level of variation in interest re-pricing that can be maintained by the Bank, and this is monitored daily by the Bank's fund management.

The tables below summaries the Bank 's exposure to the interest rate fluctuations risk that include carrying amount of the financial instruments categorized based on the repricing dates or the maturity date – whichever is earlier.

### **Sensitivity analysis of interest rate**

Changes in interest rates affect equity by the following ways:

Retained Earnings: Increase or decrease in the net interest income and fair value of the financial derivatives included in profits and losses.

Fair value reserve: Increase or decrease in the fair value of the financial assets at fair value through other comprehensive income recognized directly in the statement of other comprehensive income.

### **Liquidity risk**

Liquidity risk is the risk that the Bank is unable to meet its obligations associated with its financial liabilities when they fall due and to replace funds when they are withdrawn. The consequence may be the failure to meet obligation to repay depositors and fulfil commitments to lending.

### **Liquidity risk management**

The Bank's liquidity management process, as carried out within the Bank and monitored by Assets & Liabilities Committee, includes:

- Day-to-day funding managed by monitoring future cash flows to ensure that requirements can be met. This includes replenishment of funds as they mature or borrowed by customers. The Bank maintains an active presence in global money markets to enable this to happen.
- Maintaining a portfolio of highly marketable assets that can easily be liquidated as protection against any unforeseen interruption to cash flow.
- Monitoring the liquidity ratios against internal and regulatory requirements by the Central Bank of Egypt.
- Managing the concentration and profile of debt maturities.

For monitoring and reporting purpose, the cash flow is measured and projected for the next day, week and month respectively, which are key periods for liquidity management. The starting point for those projections represented in the contractual maturity analysis of the financial liabilities and the expected collection date of the financial assets.

Asset and liability management also monitors unmatched medium-term assets, the level and type of undrawn loan commitments, the usage of debit current account facilities and the impact of contingent liabilities such as letters of guarantees and credits.

Translation of consolidated financial statements originally issued in Arabic

Notes to the consolidated financial statements for the year ended 31 December 2023 (Continued)  
(In the notes all amounts are shown in EGP Thousands unless otherwise stated)

The following tables represent the analysis of the bank 's liquidity coverage ratio:

	<b>31 December 2023</b>	<b>31 December 2022</b>
	<b>EGP Thousands</b>	<b>EGP Thousands</b>
Total amount of high-quality liquid assets (1)	16,081,143	23,282,621
Total Cash outflows	10,601,212	16,130,875
Considerable total cash inflows within the set limit (value less than: total cash inflows, 75% of total cash outflows)	(7,950,909)	(4,788,014)
<b>Net cash outflows (2)</b>	<b>2,650,303</b>	<b>11,342,861</b>
<b>Liquidity coverage ratio (1/2)</b>	<b>606.77%</b>	<b>205.26%</b>

**Capital Management**

The Bank's objectives on managing capital, which include other elements in addition to the equity shown in the balance sheet, are as follows:

- Compliance with the legal requirements of capital in the Arab Republic of Egypt.
- Protecting the Bank's ability to continue as a going concern and enabling it to continue generating income for shareholders and other parties dealing with the Bank.
- Maintaining a strong capital base that supports the growth of activity.

The capital adequacy and capital uses are daily reviewed according to the requirements of the Central Bank of Egypt by the Bank's management, through forms based on the guidelines of the Basel Committee on Banking Supervision. The required data are submitted and provided to the Central Bank of Egypt on a quarterly basis.

**The Central Bank of Egypt requires the Bank to do the following:**

- Maintain Five billion Egyptian pounds as a minimum for issued and paid-up capital.
- Maintain a ratio equal to or more than 12.5% between the elements of capital and the elements of assets and contingent liabilities weighted by risk weights.

In accordance with the requirements of the Central Bank of Egypt to update the position of the banking sector with regard to the capital adequacy ratio according to Basel II decisions.

---

**The numerator of the capital adequacy ratio consists of the following two tiers:**

**Tier I after disposals includes the following:**

Some of the items that will be deducted/ will not be considered and mentioned in the "supervisory instructions on the minimum ratio of capital adequacy", Chapter II on the capital base will be dealt with later as stated in the instructions.

- Continuing core capital after disposals (CET1-Common Equity).
- Additional core capital

There are some items that will be deducted/ not considered and mentioned in the "supervisory instructions on the minimum ratio of capital adequacy", Chapter II on the capital base. These items are deducted from the continuous core capital if the balance is negative, while they are not considered if it is positive.

**Tier II after disposals**

It includes 45% of the special reserve, loans and subordinated deposits within the limits of the prescribed percentage, as well as the considerable provisions required against the debt instruments, loans, credit facilities and contingent liabilities included in the first stage (Stage 1).

The capital adequacy ratio model includes some important notes and points which are as follows:

1-Reserves: include legal, general, statutory, supportive and capital reserves only.

2-The "general risk reserve" is formed in accordance with the supervisory instructions issued to banks on 26 January 2019. It includes the special reserve – credit, the general bank risk reserve - credit and the reserve risk of standard (9), considering that in the subsequent periods of application, the Bank shall abide by what is stated within the instructions on minimum capital adequacy ratio "which is not to consider the bank risk reserve when calculating the ratio."

3-The values of accumulated other comprehensive income items, whether they are positive or negative, are considered.

4-Interim profits/ (losses): It is allowed to record the net interim profits within the capital base after the limited inspection report prepared by the auditor on the Bank's financial statements on a quarterly basis. As for the interim losses, they are presented without any conditions.

---

5-It does not include the part related to credit, and the explanatory instructions of the rules on the preparation and presentation of the financial statements issued by the Central Bank in April 2009, page 7, item (9) must be perused.

6-It should not exceed 1.25% of total assets and contingent liabilities weighted for credit risk, provided that the required provisions against debt instruments, loans, credit facilities and contingent liabilities included in the Stage 2 and Stage 3 are sufficient to meet the obligations for which the provision is formed.

7-"The value of exceeding the limits set for investments in countries, weighted by risk weights."

8-This value must be included in accordance with Form No. 720 related to investments in countries abroad, taking into account that the value of the capital base listed in the aforementioned statement must be adjusted according to the calculated value.

- The continuing core capital after the regulatory adjustments is Clause 1.1 before excluding contributions to financial companies (shares or investment funds) represented in Clause 1.3.1.1.

- Continuing core capital before regulatory adjustments means paid-up capital, reserves, retained earnings, general risk reserve, and accumulated other comprehensive income items net of goodwill and treasury shares.

- Subordinated loans (deposits): provided that they do not exceed 50% of Tier I after disposals and that 20% of its value is consumed in each of the last five years.

**Financial leverage ratio**

The Board of Directors of the Central Bank of Egypt, in its session held on 7 July, issued a decision approving the supervisory instructions related to the financial leverage, besides the banks' compliance with the stipulated minimum percentage (3%) on a quarterly basis, as follows:

- As an indicative percentage as of the end of September 2015 until the year 2017.

- As a compulsory supervisory percentage as of 2018.

This is in preparation for the consideration of it within the first pillar of Basel decisions (the minimum capital adequacy ratio) for maintaining the strength and integrity of the banking sector and keeping pace with the best international control practices in this regard.

The financial leverage reflects the relationship between Tier I of capital used in capital adequacy ratio (after disposals) and the Bank's assets (inside and outside the balance sheet) unweighted with risk weights.

#### **Financial instruments measured at fair value**

The fair value of one-day variable-rate placements and deposits represent their present value, and the expected fair value of variable-rate deposits is estimated based on the discounted cash flows using the interest rate prevailing in the capital markets for debts that have similar credit risk and maturity date.

#### **Loans and facilities to banks**

Loans and facilities to banks represent loans other than bank deposits. The expected fair value of loans and facilities is the discounted value of future cash flows expected to be collected and the cash flows are discounted using the current market interest rate for determining the fair value to determine the fair value to meet all the requirements. This includes replacement of funds on maturity or upon being lent to customers. The Bank is present in global money markets to achieve this objective.

#### **Loans and facilities to customers**

They are recognized at net value after deduction of provision for impairment loss. The expected fair value for these loans and facilities represents the discounted value of estimated future cash flows expected to be collected. Cash flows are deducted using the current interest rate in the market to specify the fair value.

#### **Investments in securities**

Assets through other comprehensive income or profit or loss are carried at fair value. The fair value is determined based on market prices. If such data is not available, fair value is estimated using prices of capital markets for traded securities with similar credit characteristics, dates of maturity and rates.

**Financial instruments not measured at fair value**

**Financial investments at amortized cost**

They include held-to-maturity financial assets that are listed in the market and are measured at amortized cost in case of bonds, and with respect to investment funds, the evaluation is done at the recoverable amount (fair value).

Management believes that the fair value is not materially different from the carrying amount of these assets.

**Due from banks**

The fair value of one-day variable-rate placements and deposits represent their present value, and the expected fair value of variable-rate deposits is estimated based on the discounted cash flows using the interest rate prevailing in the capital markets for debts that have similar credit risk and maturity date.

**Loans and facilities to banks**

Loans and facilities to banks represent loans other than bank deposits. The expected fair value of loans and facilities is the discounted value of future cash flows expected to be collected and the cash flows are discounted using the current market interest rate for determining the fair value. Loans and facilities are presented net of provision for impairment losses.

**Investments in securities**

Investments in securities include only financial assets that have a fixed or determinable maturity date, and the business model aims to hold them in order to obtain only the investment principal and the return thereon. The fair value of these financial assets held to maturity is determined based on market prices or prices obtained from brokers. If this data is not available, the fair value is estimated using financial market prices for tradable securities with similar credit characteristics, maturity dates and rates.

**Due to other banks and customers**

The estimated fair value of deposits with an indefinite maturity date, that include non-interest-bearing deposits, is the amount that would be repaid on demand.

The fair value of fixed interest-bearing deposits and other loans that are not traded in an active market is determined based on the discounted cash flows using the rate of return on new debts with a similar maturity date.

### **Issued debt instruments**

The total fair value is calculated based on current capital market prices. For securities that have no active markets, the discounted cash flow model is used for the first time based on the current rate that fits the remaining period till the maturity date.

#### **41- Subsequent events**

- On March 6, 2024, the Central Bank of Egypt decided to raise the overnight deposit and lending rates by 600 basis points to reach 27.25% and 28.25%, respectively. Also, the credit and discount rate was raised by also 600 points to reach 27.75 with allowing the use of a flexible exchange rate driven by market mechanisms, which led to an increase in the average official exchange rate of US dollars during the first week of the Central Bank's decision date, to reach between 49 to 50 EGP/USD.

## **42- Significant accounting policies applied**

### **42-1- Basis of consolidation**

#### **42-1-1 Business combination**

- The Group accounts for business combinations using the acquisition method when control is transferred to the Group.
- The consideration transferred in the acquisition is generally measured at fair value, as are the identifiable net assets acquired.
- Any goodwill that arises is tested annually for impairment, any gain on a bargain purchase is recognized immediately in profit or loss.
- Transaction costs are expensed as incurred, except if related to the issue of debt or equity securities.
- The consideration transferred doesn't include amounts related to the settlement of pre-existing relationships. Such amounts are generally recognized in profit or loss.
- Any contingent consideration is measured at fair value at the date of acquisition. If an obligation to pay contingent consideration that meets the definition of a financial instrument is classified as equity, then it is not re measured and settlement is accounted for within equity. Otherwise, other contingent consideration is re measured at fair value at each reporting date and subsequent changes in the fair value of the contingent consideration are recognized in profit or loss.

#### **42-1-2 Subsidiaries**

- Subsidiaries are entities controlled by the Group.
- The Group controls an entity when it is exposed to, or has rights to, variable returns from its involvement with the entity and has the ability to affect those returns through its power over the entity.
- The financial statements of subsidiaries are included in the consolidated financial statements from the date on which control commences until the date on which control ceases.

#### **42-1-3 Non-controlling interests**

NCI are measured at their proportionate share of the acquiree's identifiable net assets at the date of acquisition. Changes in the Group's interest in a subsidiary that do not result in a loss of control are accounted for as equity transactions.

#### **42-1-4 Loss of control**

When the Group loses control over a subsidiary, it derecognises the assets and liabilities of the subsidiary, and any related NCI and other components of equity. Any resulting gain or loss is recognised in profit or loss. Any interest retained in the former subsidiary is measured at fair value when control is lost.

#### **42-1-5 Interests in equity-accounted investees**

The Group's interests in equity-accounted investees comprise interests in associates and a joint venture. Associates are those entities in which the Group has significant influence, but not control or joint control, over the financial and operating policies. A joint venture is an arrangement in which the Group has joint control, where by the Group has rights to the net assets of the arrangement. Rather than rights to its assets and obligations for its liabilities.

Interests in associates and the joint venture are accounted for using the equity method. They are initially recognized at cost, which includes transaction costs. Subsequent to initial recognition, the consolidated financial statements include the Group's share of the profit or loss and OCI of equity accounted investees, until the date on which significant influence or joint control ceases.

#### **42-1-6 Transactions eliminated on consolidation**

Intra-group balances and transactions, and any unrealised income and expenses arising from intra-group transactions, are eliminated. Unrealised gains arising from transactions with equity accounted investees are eliminated against the investment to the extent of the Group's interest in the investee. Unrealised losses are eliminated in the same way as unrealised gains, but only to the extent that there is no evidence of impairment.

### **42-2 Foreign currency**

#### **42-2-1 Foreign currency transactions**

Transactions in foreign currencies are translated into the respective functional currencies of Group companies at the exchange rates at the dates of the transactions.

Monetary assets and liabilities denominated in foreign currencies are translated into the functional currency at the exchange rate at the reporting date. Non-monetary assets and liabilities that are measured at fair value in a foreign currency are translated into the functional currency at the exchange rate when the fair value was determined. Non-monetary items that are measured based on historical cost in a foreign currency are translated at the exchange rate at the date of the transaction. Foreign currency differences are generally recognised in profit or loss and presented within finance costs.

However, foreign currency differences arising from the translation of the following items are recognised in OCI:

- An investment in equity securities designated as at FVOCI (except on impairment, in which case foreign currency differences that have been recognised in OCI are reclassified to profit or loss);
- A financial liability designated as a hedge of the net investment in a foreign operation to the extent that the hedge is effective and qualifying cash flow hedges to the extent that the hedges are effective.

#### **42-2-2 Foreign operations**

The assets and liabilities of foreign operations, including goodwill and fair value adjustments arising on acquisition, are translated at the exchange rates at the reporting date. The income and expenses of foreign operations are translated at the exchange rates at the dates of the transactions.

Foreign currency differences are recognized in OCI and accumulated in the translation reserve, except to the extent that the translation difference is allocated to NCI.

When a foreign operation is disposed of in its entirety or partially such that control, significant influence or joint control is lost, the cumulative amount in the translation reserve related to that foreign operation is reclassified to profit or loss as part of the gain or loss on disposal. If the Group disposes of part of its interest in a subsidiary but retains control, then the relevant proportion of the cumulative amount is reattributed to NCI. When the Group disposes of only part of an associate or joint venture while retaining significant influence or joint control, the relevant proportion of the cumulative amount is reclassified to profit or loss.

### **42-3 Discontinued operation**

A discontinued operation is a component of the Group's business, the operations and cash flows of which can be clearly distinguished from the rest of the Group.

Classification as a discontinued operation occurs at the earlier of disposal or when the operation meets the criteria to be classified as held-for-sale.

When an operation is classified as a discontinued operation, the comparative statement of profit or loss and OCI is re-presented as if the operation had been discontinued from the start of the comparative period.

### **42-4 Revenue**

#### **42-4-1 Gain (loss) on sale of investments**

Gain (loss) resulting from sale of investments are recognized on transaction date and measured by the difference between cost and selling price less selling commission and expenses. In case of derecognizing of investments in associates, the difference between the carrying amount and the sum of both the consideration received and cumulative gain or loss that had been recognized in shareholders' equity shall be recognized in income statement.

#### **42-4-2 Dividend income**

Dividend income is recognized when declared.

#### **42-4-3 Custody fee**

Custody fees are recognized when the service is provided and the invoice is issued.

#### **42-4-4 Interest income and expenses**

Interest income and expenses are recognized in the income statement under "Interest income" item or "Interest expenses" by using the effective interest rate method of all instruments bearing interest other than those classified held for trading or which have been classified at inception "fair value through income statement".

**42-4-5 Fee and commission income**

Fee related to servicing the loan or facility are recognized in income when performing the service while the fees and commissions related to non-performing or impaired loans are not recognized, instead, they are to be recorded in marginal records off the financial position. Then they are recognized within the income pursuant to the cash basis when the interest income is collected. As for fees which represent an integral part of the actual return on the financial assets, they are treated as an amendment to the rate of actual return.

**42-4-6 Brokerage commission**

Brokerage commission resulting from purchase of and sale of securities operations in favor of clients are recorded when operation is implemented and the invoice is issued.

**42-4-7 Management fee**

Management fee is calculated as determined by the management contract of each investment fund & portfolio and recorded on accrual basis.

**42-4-8 Incentive fee**

Incentive fee is calculated based on certain percentages of the annual return realized by the fund and portfolio, however these incentive fee will not be recognized until revenue realization conditions are satisfied and there is adequate assurance of collection.

**42-4-9 Investment property rental income**

Rental income from investment property is recognized as revenue on a straight-line basis over the term of the lease. Lease incentives granted are recognized as an integral part of the total rental income, over the term of the lease. Rental income from other property is recognized as other income.

**42-4-10 Revenue from micro-finance services**

- Revenue from micro-finance services is recognized based on time proportion taking into consideration the rate of return on asset. Revenue yield is recognized in the income statement using the

effective interest method for all financial instruments that carry a yield, the effective interest method is the method of measuring the amortised cost of a financial asset and distributing the revenue over the life of time the relevant instrument. The effective interest rate is the rate that discounts estimated future cash receipts during the expected life of the financial instrument to reach the book value of the financial asset.

- When classifying loans to customers as irregular, no income is recognized on its return and it is recognized in marginal records outside the financial statements and are recognized as revenue in accordance with the cash basis when it is collected.
- The commission income is represented in the value of the difference between the yield of the financing granted micro-enterprises and the accruals of the company's bank by deducting the services provided directly from the amounts collected from the entrepreneurs.
- The benefits and commissions resulting from the performance of the service are recognized, according to the accrual basis as soon as the service is provided to the client unless those revenues cover more of the financial period are recognized on a time proportion basis.
- An administrative commission of 8% of the loan granted to customers is collected on contracting in exchange for the issuance of the loan service and administrative commission revenue are proven in the income statement upon the issuance of the loan to the client.
- A commission delay in payments of premiums is collected at rates agreed upon within the contracts and are recognized as soon as customers delayed payment on the basis of the extended delay.

#### **42-4-11 Gains from securitization**

Gains from securitization is measured as the difference between the fair value of the consideration received or is still due to the company at the end of securitization process and the carrying amount of the securitization portfolios in the company's books on the date of the transfer agreement.

## **42-5 Income tax**

Income tax expense comprises current and deferred tax. It is recognized in profit or loss except to the extent that it relates to a business combination, or items recognized directly in equity or in OCI.

### **42-5-1 Current tax**

Current tax comprises the expected tax payable or receivable on the taxable income or loss for the year and any adjustment to the tax payable or receivable in respect of previous years. The amount of current tax payable or receivable is the best estimate of the tax amount expected to be paid or received that reflects uncertainty related to income taxes, if any. It is measured using tax rates enacted or substantively enacted at the reporting date. Current tax also includes any tax arising from dividends.

Current tax assets and liabilities are offset only if certain criteria are met.

### **42-5-2 Deferred tax**

Deferred tax is recognized in respect of temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for taxation purposes.

Deferred tax is not recognized for:

- Temporary differences on the initial recognition of assets or liabilities in a transaction that is not a business combination and that affects neither accounting nor taxable profit or loss;
- Temporary differences related to investments in subsidiaries, associates and joint arrangements to the extent that the Group is able to control the timing of the reversal of the temporary differences and it is probable that they will not reverse in the foreseeable future.
- Taxable temporary differences arising on the initial recognition of goodwill.

Deferred tax assets are recognized for unused tax losses, unused tax credits and deductible temporary differences to the extent that it is probable that future taxable profits will be available against which they can be used. Future taxable profits are determined based on business

plans for individual subsidiaries in the Group. Deferred tax assets are reviewed at each reporting date and are reduced to the extent that it is no longer probable that the related tax benefit will be realized; such reductions are reversed when the probability of future taxable profits improves.

Unrecognized deferred tax assets are reassessed at each reporting date and recognized to the extent that it has become probable that future taxable profits will be available against which they can be used.

Deferred tax is measured at the tax rates that are expected to be applied to temporary differences when they reverse, using tax rates enacted or substantively enacted at the reporting date.

The measurement of deferred tax reflects the tax consequences that would follow from the manner in which the Group expects, at the reporting date, to recover or settle the carrying amount of its assets and liabilities. For this purpose, the carrying amount of investment property measured at fair value is presumed to be recovered through sale, and the Group has not rebutted this presumption.

Deferred tax assets and liabilities are offset only if certain criteria are met.

## **42-6 Property, plant and equipment**

### **42-6-1 Recognition and measurement**

Items of property, plant and equipment are measured at cost less accumulated depreciation and any accumulated impairment losses. The cost of certain items of property, plant and equipment . If significant parts of an item of property, plant and equipment have different useful lives, then they are accounted for as separate items (major components) of property, plant and equipment. Any gain or loss on disposal of an item of property, plant and equipment is recognized in profit or loss.

### **42-6-2 Subsequent expenditure**

Subsequent expenditure is capitalised only if it is probable that the future economic benefits associated with the expenditure will flow to the Group.

---

#### **42-6-3 Depreciation**

Depreciation is calculated to write off the cost of items of property, plant and equipment less their estimated residual values using the straight-line method over their estimated useful lives, and is generally recognized in profit or loss. Leased assets are depreciated over the shorter of the lease term and their useful lives unless it is reasonably certain that the Group will obtain ownership by the end of the lease term. Land is not depreciated. The estimated useful lives of property, plant and equipment for current and comparative periods are as follows:

	<b>Estimated useful life</b>
- Buildings	20 - 50 years
- Office furniture, equipment & electrical appliances	2-16.67 years
- Computer equipment	3.33 - 5 years
- Transportation means	3.33 - 8 years

Depreciation methods, useful lives and residual values are reviewed at each reporting date and adjusted if appropriate.

#### **42-6-4 Reclassification to investment property**

When the use of a property changes from owner-occupied to investment property.

#### **42-7 Projects under construction**

Projects under construction are recognized initially at cost, the book value is amended by any impairment concerning the value of these projects cost includes all expenditures directly attributable to bringing the asset to a working condition for its intended use. Property and equipment under construction are transferred to property and equipment caption when they are completed and are ready for their intended use.

#### **42-8 Intangible assets and goodwill**

##### **- Goodwill**

Goodwill arising on the acquisition of subsidiaries is measured at cost less accumulated impairment losses.

**- Research and development**

Expenditure on research activities is recognized in profit or loss as incurred. Development expenditure is capitalised only if the expenditure can be measured reliably, the product or process is technically and commercially feasible, future economic benefits are probable and the Group intends to and has sufficient resources to complete development and to use or sell the asset. Otherwise, it is recognized in profit or loss as incurred. Subsequent to initial recognition, development expenditure is measured at cost less accumulated amortisation and any accumulated impairment losses.

**- Other intangible assets**

Other intangible assets, are measured at cost less accumulated amortisation and any accumulated impairment losses.

**42-9 Investment property**

Investment property is measured at cost on initial recognition. Subsequent to initial recognition investment property is measured at cost less accumulated depreciation and impairment loss, if any. Investment property is depreciated on a straight line basis over its useful life. The estimated useful life of investment property is 33 years.

**42-10 Assets held for sale**

Non-current assets, or disposal groups comprising assets and liabilities, are classified as held-for-sale if it is highly probable that they will be recovered primarily through sale rather than through continuing use.

Such assets, or disposal groups, are generally measured at the lower of their carrying amount and fair value less costs to sell. Any impairment loss on a disposal group is allocated first to goodwill, and then to the remaining assets and liabilities on a pro rata basis, except that no loss is allocated to inventories, financial assets, deferred tax assets, employee benefit assets, investment property or biological assets, which continue to be measured in accordance with the Group's other accounting policies. Impairment losses on initial classification as held-for-sale or held-for distribution and subsequent gains and losses on remeasurement are recognised in profit or loss.

Once classified as held-for-sale, intangible assets and property, plant and equipment are no longer amortised or depreciated, and any equity-accounted investee is no longer equity accounted.

## **42-11 Financial instruments**

### **42-11-1 Recognition and initial measurement**

Trade receivables and debt securities issued are initially recognised when they are originated. All other financial assets and financial liabilities are initially recognised when the Group becomes a party to the contractual provisions of the instrument.

A financial asset (unless it is a trade receivable without a significant financing component) or financial liability is initially measured at fair value plus, for an item not at FVTPL, transaction costs that are directly attributable to its acquisition or issue. A trade receivable without a significant financing component is initially measured at the transaction price.

### **42-11-2 Classification and subsequent measurement**

#### **Financial assets**

On initial recognition, a financial asset is classified as measured at: amortised cost; FVOCI – debt investment; FVOCI – equity investment; or FVTPL.

Financial assets are not reclassified subsequent to their initial recognition unless the Group changes its business model for managing financial assets, in which case all affected financial assets are reclassified on the first day of the first reporting period following the change in the business model.

A financial asset is measured at amortised cost if it meets both of the following conditions and is not designated as at FVTPL:

- it is held within a business model whose objective is to hold assets to collect contractual cash flows; and
- its contractual terms give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding.

A debt investment is measured at FVOCI if it meets both of the following conditions and is not designated as at FVTPL:

- it is held within a business model whose objective is achieved by both collecting contractual cash flows and selling financial assets; and
- its contractual terms give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding.

On initial recognition of an equity investment that is not held for trading, the Group may irrevocably elect to present subsequent changes in the investment's fair value in OCI. This election is made on an instrument-by-instrument basis.

All financial assets not classified as measured at amortised cost or FVOCI as described above are measured at FVTPL. This includes all derivative financial assets. On initial recognition, the Group may irrevocably designate a financial asset that otherwise meets the requirements to be measured at amortised cost or at FVOCI as at FVTPL if doing so eliminates or significantly reduces an accounting mismatch that would otherwise arise.

#### **42-11-3 Financial assets – Business model assessment**

The Group makes an assessment of the objective of the business model in which a financial asset is held at a portfolio level because this best reflects the way the business is managed and information is provided to management. The information considered includes:

- The stated policies and objectives for the portfolio and the operation of those policies in practice. These include whether management's strategy focuses on earning contractual interest income, maintaining a particular interest rate profile, matching the duration of the financial assets to the duration of any related liabilities or expected cash outflows or realizing cash flows through the sale of the assets;
- How the performance of the portfolio is evaluated and reported to the Group's management;
- The risks that affect the performance of the business model (and the financial assets held within that business model) and how those risks are managed;
- How managers of the business are compensated – e.g. whether compensation is based on the fair value of the assets managed or the contractual cash flows collected; and
- The frequency, volume and timing of sales of financial assets in prior periods, the reasons for such sales and expectations about future sales activity.

Transfers of financial assets to third parties in transactions that do not qualify for derecognition are not considered sales for this

purpose, consistent with the Group's continuing recognition of the assets.

Financial assets that are held for trading or are managed and whose performance is evaluated on a fair value basis are measured at FVTPL.

If the company determines that its business model has changed in a way that is significant to its operations, then all affected assets are reclassified from the first day of the next reporting period (the reclassification date). The change in business model has to be affected before the reclassification date. In order for reclassification to be appropriate, the company cannot engage in activities consistent with its former business model after the date of change in business model. Prior periods are not restated.

**42-11-4 Financial assets – Assessment whether contractual cash flows are solely payments of principal and interest**

For the purposes of this assessment, 'principal' is defined as the fair value of the financial asset on initial recognition. 'Interest' is defined as consideration for the time value of money and for the credit risk associated with the principal amount outstanding during a particular period of time and for other basic lending risks and costs (e.g. liquidity risk and administrative costs), as well as a profit margin.

In assessing whether the contractual cash flows are solely payments of principal and interest, the Group considers the contractual terms of the instrument. This includes assessing whether the financial asset contains a contractual term that could change the timing or amount of contractual cash flows such that it would not meet this condition. In making this assessment, the Group considers:

- Contingent events that would change the amount or timing of cash flows;
- terms that may adjust the contractual coupon rate, including variable-rate features;
- Prepayment and extension features; and
- Terms that limit the Group's claim to cash flows from specified assets (e.g. non-recourse features).

**EFG Holding Company**  
**(Previously EFG - Hermes Holding Company)**  
**(Egyptian Joint Stock Company)**

Translation of consolidated financial  
statements originally issued in Arabic

Notes to the consolidated financial statements for the year ended 31 December 2023 (Continued)  
(In the notes all amounts are shown in EGP Thousands unless otherwise stated)

---

A prepayment feature is consistent with the solely payments of principal and interest criterion if the prepayment amount substantially represents unpaid amounts of principal and interest on the principal amount outstanding, which may include reasonable compensation for early termination of the contract. Additionally, for a financial asset acquired at a discount or premium to its contractual par amount, a feature that permits or requires prepayment at an amount that substantially represents the contractual par amount plus accrued (but unpaid) contractual interest (which may also include reasonable compensation for early termination) is treated as consistent with this criterion if the fair value of the prepayment feature is insignificant at initial recognition.

**42-11-5 Financial assets – Subsequent measurement and gains and losses**

<b>Financial assets at FVTPL</b>	These assets are subsequently measured at fair value. Net gains and losses, including any interest or dividend income, are recognised in profit or loss.
<b>Financial assets at amortised cost</b>	These assets are subsequently measured at amortised cost using the effective interest method. The amortised cost is reduced by impairment losses. Interest income, foreign exchange gains and losses and impairment are recognised in profit or loss. Any gain or loss on derecognition is recognised in profit or loss.
<b>Debt investments at FVOCI</b>	These assets are subsequently measured at fair value. Interest income calculated using the effective interest method, foreign exchange gains and losses and impairment are recognised in profit or loss. Other net gains and losses are recognised in OCI. On derecognition, gains and losses accumulated in OCI are reclassified to profit or loss.

---

<b>Equity investments at FVOCI</b>	These assets are subsequently measured at fair value. Dividends are recognised as income in profit or loss unless the dividend clearly represents a recovery of part of the cost of the investment. Other net gains and losses are recognised in OCI and are never reclassified to profit or loss.
------------------------------------	--

#### **42-11-6 Financial liabilities – Classification, subsequent measurement and gains and losses**

Financial liabilities are classified as measured at amortised cost or FVTPL. A financial liability is classified as at FVTPL if it is classified as held-for-trading, it is a derivative or it is designated as such on initial recognition. Financial liabilities at FVTPL are measured at fair value and net gains and losses, including any interest expense, are recognised in profit or loss. Other financial liabilities are subsequently measured at amortised cost using the effective interest method. Interest expense and foreign exchange gains and losses are recognised in profit or loss. Any gain or loss on derecognition is also recognised in profit or loss.

#### **42-11-7 Derecognition**

##### **Financial assets**

The Group derecognises a financial asset when the contractual rights to the cash flows from the financial asset expire, or it transfers the rights to receive the contractual cash flows in a transaction in which substantially all of the risks and rewards of ownership of the financial asset are transferred or in which the Group neither transfers nor retains substantially all of the risks and rewards of ownership and it does not retain control of the financial asset.

The Group enters into transactions whereby it transfers assets recognised in its statement of financial position, but retains either all or substantially all of the risks and rewards of the transferred assets. In these cases, the transferred assets are not derecognised.

##### **Financial liabilities**

The Group derecognises a financial liability when its contractual obligations are discharged or cancelled, or expire. The Group also

derecognises a financial liability when its terms are modified and the cash flows of the modified liability are substantially different, in which case a new financial liability based on the modified terms is recognised at fair value.

On derecognition of a financial liability, the difference between the carrying amount extinguished and the consideration paid (including any non-cash assets transferred or liabilities assumed) is recognised in profit or loss.

#### **42-11-8 Offsetting**

Financial assets and financial liabilities are offset and the net amount presented in the statement of financial position when, and only when, the Group currently has a legally enforceable right to set off the amounts and it intends either to settle them on a net basis or to realise the asset and settle the liability simultaneously.

#### **42-11-9 Derivative financial instruments and hedge accounting**

The Group holds derivative financial instruments to hedge its foreign currency and interest rate risk exposures. Embedded derivatives are separated from the host contract and accounted for separately if the host contract is not a financial asset and certain criteria are met.

Derivatives are initially measured at fair value. Subsequent to initial recognition, derivatives are measured at fair value, and changes therein are generally recognised in profit or loss.

The Group designates certain derivatives as hedging instruments to hedge the variability in cash flows associated with highly probable forecast transactions arising from changes in foreign exchange rates and interest rates and certain derivatives and non-derivative financial liabilities as hedges of foreign exchange risk on a net investment in a foreign operation.

At inception of designated hedging relationships, the Group documents the risk management objective and strategy for undertaking the hedge. The Group also documents the economic relationship between the hedged item and the hedging instrument, including whether the changes in cash flows of the hedged item and hedging instrument are expected to offset each other.

### **Cash flow hedges**

When a derivative is designated as a cash flow hedging instrument, the effective portion of changes in the fair value of the derivative is recognised in OCI and accumulated in the hedging reserve. The effective portion of changes in the fair value of the derivative that is recognised in OCI is limited to the cumulative change in fair value of the hedged item, determined on a present value basis, from inception of the hedge. Any ineffective portion of changes in the fair value of the derivative is recognised immediately in profit or loss.

The Group designates only the change in fair value of the spot element of forward exchange contracts as the hedging instrument in cash flow hedging relationships. The change in fair value of the forward element of forward exchange contracts (forward points) is separately accounted for as a cost of hedging and recognised in a costs of hedging reserve within equity.

When the hedged forecast transaction subsequently results in the recognition of a non-financial item such as inventory, the amount accumulated in the hedging reserve and the cost of hedging reserve is included directly in the initial cost of the non-financial item when it is recognised.

For all other hedged forecast transactions, the amount accumulated in the hedging reserve and the cost of hedging reserve is reclassified to profit or loss in the same period or periods during which the hedged expected future cash flows affect profit or loss.

If the hedge no longer meets the criteria for hedge accounting or the hedging instrument is sold, expires, is terminated or is exercised, then hedge accounting is discontinued prospectively. When hedge accounting for cash flow hedges is discontinued, the amount that has been accumulated in the hedging reserve remains in equity until, for a hedge of a transaction resulting in the recognition of a non-financial item, it is included in the non-financial item's cost on its initial recognition or,

For other cash flow hedges, it is reclassified to profit or loss in the same period or periods as the hedged expected future cash flows affect profit or loss.

If the hedged future cash flows are no longer expected to occur, then the amounts that have been accumulated in the hedging reserve and the cost of hedging reserve are immediately reclassified to profit or loss.

### **Net investment hedges**

When a derivative instrument or a non-derivative financial liability is designated as the hedging instrument in a hedge of a net investment in a foreign operation, the effective portion of, for a derivative, changes in the fair value of the hedging instrument or, for a non-derivative, foreign exchange gains and losses is recognised in OCI and presented in the translation reserve within equity. Any ineffective portion of the changes in the fair value of the derivative or foreign exchange gains and losses on the non-derivative is recognised immediately in profit or loss. The amount recognised in OCI is reclassified to profit or loss as a reclassification adjustment on disposal of the foreign operation.

## **42-12 Share capital**

### **42-12-1 Ordinary shares**

Incremental costs directly attributable to the issue of ordinary shares are recognized as a deduction from equity. Income tax relating to transaction costs of an equity transaction are accounted for in accordance with EAS 24.

### **42-12-2 Repurchase and reissue of ordinary shares (treasury shares)**

When shares recognized as equity are repurchased, the amount of the consideration paid, which includes directly attributable costs is recognized as a deduction from equity. Repurchased shares are classified as treasury shares and are presented in the treasury share reserve. When treasury shares are sold or reissued subsequently, the amount received is recognized as an increase in equity and the resulting surplus or deficit on the transaction is presented within share premium.

## **42-13 Legal reserve**

The Company's statutes provides for deduction of a sum equal to 5% of the annual net profit for formation of the legal reserve. Such deduction will be ceased when the total reserve reaches an amount equal to half of the Company's issued capital and when the reserve falls below this limit, it shall be necessary to resume.

## **42-14 Impairment**

### **42-14-1 Non-derivative financial assets**

#### **Financial instruments and contract assets**

The Group recognises loss allowances for Expected Credit Loss (ECLs) on:

- Financial assets measured at amortised cost;
- Debt investments measured at FVOCI;
- contract assets.

The Group also recognises loss allowances for ECLs on loans receivables.

The Group measures loss allowances at an amount equal to lifetime ECLs, except for the following, which are measured at 12-month ECLs:

- Debt securities that are determined to have low credit risk at the reporting date; and
- Other debt securities and bank balances for which credit risk (i.e. the risk of default occurring over the expected life of the financial instrument) has not increased significantly since initial recognition.

When determining whether the credit risk of a financial asset has increased significantly since initial recognition and when estimating ECLs, the Group considers reasonable and supportable information that is relevant and available without undue cost or effort. This includes both quantitative and qualitative information and analysis, based on the Group's historical experience and informed credit assessment, that includes forward-looking information.

The Group assumes that the credit risk on a financial asset has increased significantly if it is more than 30 days past due. unless it can be rebutted.

The Group considers a financial asset to be in default when:

- The debtor is unlikely to pay its credit obligations to the Group in full, without recourse by the Group to actions such as realising security (if any is held); or
- The financial asset is more than 90 days past due unless it can be rebutted.

Lifetime ECLs are the ECLs that result from all possible default events over the expected life of a financial instrument.

12-month ECLs are the portion of ECLs that result from default events that are possible within the 12 months after the reporting date (or a shorter period if the expected life of the instrument is less than 12 months).

The maximum period considered when estimating ECLs is the maximum contractual period over which the Group is exposed to credit risk.

#### **42-14-2 Measurement of ECLs**

ECLs are a probability-weighted estimate of credit losses. Credit losses are measured as the present value of all cash shortfalls (i.e. the difference between the cash flows due to the entity in accordance with the contract and the cash flows that the Group expects to receive).

ECLs are discounted at the effective interest rate of the financial asset.

#### **42-14-3 Credit-impaired financial assets**

At each reporting date, the Group assesses whether financial assets carried at amortised cost and debt securities at FVOCI are credit-impaired. A financial asset is 'credit-impaired' when one or more events that have a detrimental impact on the estimated future cash flows of the financial asset have occurred.

Evidence that a financial asset is credit-impaired includes the following observable data:

- Significant financial difficulty of the debtor;
- A breach of contract such as a default or being more than 90 days past due;
- The restructuring of a loan or advance by the Group on terms that the Group would not consider otherwise;
- It is probable that the debtor will enter bankruptcy or other financial reorganisation; or
- The disappearance of an active market for a security because of financial difficulties.

**42-14-4 Presentation of allowance for ECL in the statement of financial position**

Loss allowances for financial assets measured at amortised cost are deducted from the gross carrying amount of the assets.

For debt securities at FVOCI, the loss allowance is charged to profit or loss and is recognised in OCI.

**42-14-5 Write-off**

The gross carrying amount of a financial asset is written off when the Group has no reasonable expectations of recovering a financial asset in its entirety or a portion thereof. For individual customers, the Group has a policy of writing off the gross carrying amount when the financial asset is 180 days past due based on historical experience of recoveries of similar assets. For corporate customers, the Group individually makes an assessment with respect to the timing and amount of write-off based on whether there is a reasonable expectation of recovery. The Group expects no significant recovery from the amount written off. However, financial assets that are written off could still be subject to enforcement activities in order to comply with the Group's procedures for recovery of amounts due.

**42-14-6 Non-financial assets**

- At each reporting date, the Group reviews the carrying amounts of its non-financial assets (other than, investment property, contract assets and deferred tax assets) to determine whether there is any indication of impairment. If any such indication exists, then the asset's recoverable amount is estimated. Goodwill is tested annually for impairment.
- For impairment testing, assets are grouped together into the smallest group of assets that generates cash inflows from continuing use that are largely independent of the cash inflows of other assets or CGUs. Goodwill arising from a business combination is allocated to CGUs or groups of CGUs that are expected to benefit from the synergies of the combination.

**EFG Holding Company**  
**(Previously EFG - Hermes Holding Company)**  
**(Egyptian Joint Stock Company)**

Translation of consolidated financial  
statements originally issued in Arabic

Notes to the consolidated financial statements for the year ended 31 December 2023 (Continued)  
(In the notes all amounts are shown in EGP Thousands unless otherwise stated)

---

- The recoverable amount of an asset or CGU is the greater of its value in use and its fair value less costs to sell. Value in use is based on the estimated future cash flows, discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset or CGU.
- An impairment loss is recognised if the carrying amount of an asset or CGU exceeds its recoverable amount.
- Impairment losses are recognised in profit or loss. They are allocated first to reduce the carrying amount of any goodwill allocated to the CGU, and then to reduce the carrying amounts of the other assets in the CGU on a pro rata basis.
- An impairment loss in respect of goodwill is not reversed. For other assets, an impairment loss is reversed only to the extent that the asset's carrying amount does not exceed the carrying amount that would have been determined, net of depreciation or amortisation, if no impairment loss had been recognised.

#### **42-15 Provisions**

Provisions are recognized when the Group has a legal or constructive current obligation as a result of a past event and it's probable that a flow of economic benefits will be required to settle the obligation. If the effect is material, provisions are determined by discounting the expected future cash flows at a pre-tax rate that reflects current market assessment of the time value of money and, where appropriate, the risks specific to the liability. Provisions are reviewed at the financial position date and amended (when necessary) to represent the best current estimate.

#### **42-16 Treasury bills**

Treasury bills are recorded at nominal value and the unearned income is recorded under the item of "creditors and other credit balances". Treasury bills are presented on the financial position net of the unearned income.

**42-17 Trade, and notes receivables, debtors and other debit balances**

- Trade, notes receivables, debtors and other debit balances are stated at nominal value less impairment losses.
- The Company's lessees and the leased assets are regularly classified & evaluated and their obligations are reduced by the rent value paid in each financial period, and with the assurance of the availability of adequate guarantee to collect the client's rent values.

**42-18 Cash and cash equivalents**

For the purpose of preparing the statement of cash flows, cash and cash equivalents includes the balances, whose maturity do not exceed three months from the date of acquisition, cash on hand, cheques under collection and due from banks and financial institutions.

**42-19 Profit sharing to employees**

The holding company pays 10% of its cash dividends as profit sharing to its employees provided that it will not exceed total employees' annual salaries. Profit sharing is recognized as a dividend distribution through equity and as a liability when approved by the Company's shareholders.

**42-20 Employees benefits**

**42-20-1 Share based payments**

**Equity settled transactions**

For equity-settled share-based payment transactions, the company measure the services received, and the corresponding increase in equity, indirectly, by reference to the fair value of the equity instruments granted. The fair value of those equity instruments is measured at grant date.

Vesting conditions, other than market conditions, are taken into account by adjusting the number of equity instruments included in the measurement of the transaction amount so that, ultimately, the amount recognized for services received as consideration for the equity instruments granted are based on the number of equity instruments that eventually vest. Hence, on a cumulative basis, no amount is recognized for services received if the equity instruments granted do not vest because of failure to satisfy a vesting condition.

The company recognize an amount for the services received during the vesting period based on the best available estimate of the number of equity instruments expected to vest and revise that estimate, if necessary, if subsequent information indicates that the number of equity instruments expected to vest differs from previous estimates. On vesting date, the entity shall revise the estimate to equal the number of equity instruments that ultimately vested

## **42-21 Micro-enterprises Receivables**

### **42-21-1 Credit policy**

#### **Funding Consideration**

- Funding are granted to clients who have previous experience not less than one year in his current activity which is confirmed by the client with adequate documentation and field inquiry.
- Funding are granted to the client which it's installment is suitable according to his predictable income activity and this done throw analyzing client's revenues and expenses and his foreseeable marginal income, and this done by the branches specialists of the company on the prepared form for this purpose(financial study form and credit decision).
- Before grant funding, a client activity field inquiry is done.
- Recording inquiries results about client and guarantor with inquiring forms of the company which reveal client's activity (visit form & Inquiry form).
- The company prohibit grant funding for new client unless the activity is existing with previous one year experience where the granted funds be within a minimum 1 000 EGP and maximum 30 000 EGP with loan duration of 12 months.
- Inquiries for clients are performed by I-Score Company before granting and in case of approval on granting. The credit limit of the client is considered when calculating the client's revenue and expenses.

#### **Client's Life Insurance**

The insurance process on the client is performed with the authorized companies from insurance supervisory authority.

### **Client's Following up**

The company keeps specialists in branches from following up all regular clients, and irregular with continuous application of that during finance period with judging on their commitment in paying the remaining installments and this done through recording visits for clients with daily basis and also with data base provided by computer system for all branches all over the republic.

### **Impairment loss of micro financed loans**

The company at the date of the financial statements estimates the impairment loss of micro financed loans, in the light of the basis and rules of granting credit and forming the provisions according to the Board of Directors decision of the Financial Supervisory Authority No. (173) issued on December 21, 2014 to deal with the impairment loss.

## **42-22 Leases**

At inception of a contract, the Group assesses whether a contract is, or contains, a lease. A contract is, or contains, a lease if the contract conveys the right to control the use of an identified asset for a period of time in exchange for consideration. To assess whether a contract conveys the right to control the use of an identified asset, the Group uses the definition of a lease in EAS 49.

### **42-22-1 As a lessee**

At commencement or on modification of a contract that contains a lease component, the Group allocates the consideration in the contract to each lease component on the basis of its relative stand-alone prices. However, for the leases of property the Group has elected not to separate non-lease components and account for the lease and non-lease components as a single lease component.

The Group recognises a right-of-use asset and a lease liability at the lease commencement date. The right-of-use asset is initially measured at cost, which comprises the initial amount of the lease liability adjusted for any lease payments made at or before the commencement date, plus any initial direct costs incurred and an estimate of costs to dismantle and remove the underlying asset or to restore the underlying asset or the site on which it is located, less any lease incentives received.

**EFG Holding Company**  
**(Previously EFG - Hermes Holding Company)**  
**(Egyptian Joint Stock Company)**

Translation of consolidated financial  
statements originally issued in Arabic

Notes to the consolidated financial statements for the year ended 31 December 2023 (Continued)  
(In the notes all amounts are shown in EGP Thousands unless otherwise stated)

---

The right-of-use asset is subsequently depreciated using the straight-line method from the commencement date to the end of the lease term, unless the lease transfers ownership of the underlying asset to the Group by the end of the lease term or the cost of the right-of-use asset reflects that the Group will exercise a purchase option. In that case the right-of-use asset will be depreciated over the useful life of the underlying asset, which is determined on the same basis as those of property and equipment. In addition, the right-of-use asset is periodically reduced by impairment losses, if any, and adjusted for certain remeasurements of the lease liability.

The lease liability is initially measured at the present value of the lease payments that are not paid at the commencement date, discounted using the interest rate implicit in the lease or, if that rate cannot be readily determined, the Group's incremental borrowing rate. Generally, the Group uses its incremental borrowing rate as the discount rate.

The Group determines its incremental borrowing rate by obtaining interest rates from various external financing sources and makes certain adjustments to reflect the terms of the lease and type of the asset leased.

Lease payments included in the measurement of the lease liability comprise the following:

fixed payments, including in-substance fixed payments;  
variable lease payments that depend on an index or a rate, initially measured using the index or rate as at the commencement date;  
amounts expected to be payable under a residual value guarantee;  
and the exercise price under a purchase option that the Group is reasonably certain to exercise, lease payments in an optional renewal period if the Group is reasonably certain to exercise an extension option, and penalties for early termination of a lease unless the Group is reasonably certain not to terminate early.

The lease liability is measured at amortised cost using the effective interest method. It is remeasured when there is a change in future lease payments arising from a change in an index or rate, if there is a change in the Group's estimate of the amount expected to be payable under a residual value guarantee, if the Group changes its

assessment of whether it will exercise a purchase, extension or termination option or if there is a revised in-substance fixed lease payment.

When the lease liability is remeasured in this way, a corresponding adjustment is made to the carrying amount of the right-of-use asset, or is recorded in profit or loss if the carrying amount of the right-of-use asset has been reduced to zero.

The Group presents right-of-use assets that do not meet the definition of investment property in 'property, plant and equipment' and lease liabilities in 'loans and borrowings' in the statement of financial position.

#### **Short-term leases and leases of low-value assets**

The Group has elected not to recognise right-of-use assets and lease liabilities for leases of low – value assets and short-term leases, including IT equipment. The Group recognises the lease payments associated with these leases as an expense on a straight-line basis over the lease term.

#### **42-22-2 As a lessor**

At inception or on modification of a contract that contains a lease component, the Group allocates the consideration in the contract to each lease component on the basis of their relative stand-alone prices.

When the Group acts as a lessor, it determines at lease inception whether each lease is a finance lease or an operating lease.

To classify each lease, the Group makes an overall assessment of whether the lease transfers substantially all of the risks and rewards incidental to ownership of the underlying asset. If this is the case, then the lease is a finance lease; if not, then it is an operating lease. As part of this assessment, the Group considers certain indicators such as whether the lease is for the major part of the economic life of the asset.

When the Group is an intermediate lessor, it accounts for its interests in the head lease and the sub-lease separately. It assesses the lease classification of a sub-lease with reference to the right-of-use asset

arising from the head lease, not with reference to the underlying asset. If a head lease is a short-term lease to which the Group applies the exemption described above, then it classifies the sub-lease as an operating lease.

If an arrangement contains lease and non-lease components, then the Group applies EAS 11 to allocate the consideration in the contract. The Group applies the derecognition and impairment requirements in EAS 47 to the net investment in the lease. The Group further regularly reviews estimated unguaranteed residual values used in calculating the gross investment in the lease.

The Group recognises lease payments received under operating leases as income on a straight- line basis over the lease term as part of 'other revenue'.

#### **42-23 Operating segment**

A segment is a distinguishable component of the Group that is engaged either in providing products or services (business segment) or in providing products or services within a particular economic environment (geographical segment), which is subject to risks and rewards that are different from those of other segments. The Group's primary format for segment reporting is based on business segment.
